

Remediation of Contaminated Soils, 8-26 August 2011

"MSc summer course (5 erts) on 'Remediation of Contaminated Soils' at University of Copenhagen, Life Faculty during weeks 32-34 (8-26 August 2011).

Short course description: Contaminated soils pose a serious risk to human health and ecosystem functioning at thousands of sites in Nordic and other countries. The course aims at giving environmentally interested students comprehensive, state-of-the-art knowledge about soil contamination with heavy metals, oil, PAH etc., and to provide them with skills and competences about the most important remediation methods and their suitability in relation to specific contaminations. The teaching will address a wide range of the most decisive soil remediation parameters including climate, soil type and contaminant source, which will enable the students to act as soil remediators both locally and globally. The entire course description can be found on www.kursusinfo.life.ku.dk/Kurser/230033

To participate, you need enrolment at University of Copenhagen, Life Faculty but the enrolment will not start before beginning of June. However, if interested you are very much encouraged already now to contact me as course responsible Ole K. Borggaard: okb@life.ku.dk. When contacting me please give me the following information:

Why do you want to participate (1-2 lines)

Your background

Home university (mail address)

Your citizenship

Your E-mail address."

Do you want more information please contact course responsible Ole K. Borggaard: okb@life.ku.dk
